Very few persons—even those who are well informed on most matters—know how much an inch of rain is. The average man or woman probably has an idea that an inch is a mere trifle on nature's part. This is entirely wrong. In reality it is a good big rainfall—more than falls in most places in an average week. A rainfall of one inch means literally that the amount of water descending in a particular shower would cover the surrounding territory to a depth of one inch, providing it did not run away or soak into the ground. An inch of rain coming down on a single acre of land would fill more than six hundred barrels of forty-five gallons capacity each. This amount of water would weigh more than one hundred and ten tons, or nearly a quarter of a million pounds.—Daily Oklahoman.

HUSBAND RESCUED DESPAIRING WIFE

After Four Years of Discouraging Conditions, Mrs. Bullock Gave Up in Despair. Husband Came to Rescue.

Catron, Ky.—In an interesting letter from this place, Mrs. Bettie Bullock writes as follows: "I suffered for four years, with womanly troubles, and during this time, I could only sit up for a little while, and could not walk anywhere at all. At times, I would have severe pains in my left side.

The doctor was called in, and his treatment relieved me for a while, but I was soon confined to my bed again. After that, nothing seemed to do me any good.

I had gotten so weak I could not stand, and I gave up in despair.

At last, my husband got me a bottle of Cardui, the woman's tonic, and I commenced taking it. From the very first dose, I could tell it was helping me. I can now walk two miles without tiring me, and am doing all my work."

If you are all run down from womanly troubles, don't give up in despair. Try Cardui, the woman's tonic. It has helped more than a million women, in its 50 years of continuous success, and should surely help you, too. Your druggist has sold Cardui for years. He knows what it will do. Ask him. He will recommend it. Begin taking Cardui today.
